Project Design Phase - I

Proposed Solution Template

Date	**23 September 2022**
Team ID	**PNT2022TMID39833**
Project Name	**Analytics For Hospitals' Health-Care Data**
Maximum Marks	**2Marks**

Proposed Solution Template:

S.NO.	Parameters	Description
1.	Problem Statement (Problem to be solved)	EHR data matched patient-reported data in 23.5 percentof records in a study at an ophthalmology practise. Patients' EHR data did not agree in any way when they reported having three or more eye health complaints.
2.	Idea / Solution description	Predictive analytics can create patient journey dashboards and disease trajectories that can lead toeffective, and resultdriven healthcare. It improves treatment delivery, cuts costs, improves efficiencies,and so on.
3.	Novelty / Uniqueness	Healthcare data frequently resides in several locations. from various departments, such as radiology or pharmacy, to various source systems, such as EMRs or HR software. The organisation asa whole contributes to the data. This data becomes accessible andusable when it is combined into a single, central system, such as an enterprise data warehouse (EDW).
4.	Social Impact / Customer Satisfaction	Enhanced diagnosis Improved medical treatment Improved health results Improved relationships with patients More positive health indicators

5.	Business Model (Revenue Model)	The two factors that have the biggest negative effects on hospital income are claim denials and patient incapacity to pay their part. 90% more uncollectible claimdenials were written off by hospitals and healthcare systems in 2017 compared to the preceding six years.
6.	Scalability of the Solution	A variety of institutions must store, evaluate, and take action on the massive amounts of data being produced bythe health care sector as it expands quickly. India is a vast, culturally varied nation with a sizable population that is increasingly able to access centralised healthcareservices
